

# CHILDREN IN FINANCIAL HARDSHIP: MICHIGAN

The number of children growing up in financial hardship in Michigan has been systematically undercounted. For decades, policymakers and community stakeholders have relied on the outdated Federal Poverty Level (FPL) to understand the extent of financial hardship in their communities. According to the FPL, 17% of children in Michigan (365,358) lived in poverty in 2019. Yet United For ALICE data shows that another 27% (580,761) were also growing up in hardship, in households that earned above the FPL but not enough to afford the basics in the communities where they lived.

The reality is that nearly one million (946,119) children in Michigan — 44% of all children — lived in a household with income below the ALICE Threshold of Financial Survival in 2019. These households included families in poverty as well as those who were ALICE: Asset Limited, Income Constrained, Employed. ALICE households don't earn enough to afford the essentials of housing, child care, food, transportation, health care, a smartphone plan, and taxes — the basics needed to live and work in the modern economy. There are children below the ALICE Threshold in communities across the state (PUMAs), at rates ranging from 17% in Livingston County to 84% in Detroit City (North Central).

#### Children by Household, Michigan, 2019

Number of Children in Michigan = 2.1 Million

Note: This research uses the U.S. Census Bureau's American Community Survey Public Use Microdata Samples (PUMS) and focuses on children, whose ALICE status is determined by their household's income compared to local cost of living. The data does not include children who are unhoused or living in group quarters. In this brief, percentages are rounded to whole numbers for ease of reading, which may result in percentages totaling 99% or 101%. All numbers are presented in the ALICE Children Data Dashboard.

Sources: ALICE Threshold, 2019; U.S. Census Bureau, American Community Survey, PUMS, 2019

## **KEY FINDINGS**

- Forty-four percent of children in Michigan lived in households experiencing financial hardship in 2019. While 17% were below the FPL, an additional 27% were ALICE.
- While there are children below the ALICE Threshold across all demographic groups, 71% of Black children and 58% of Hispanic children in Michigan lived in households with income below the Threshold in 2019, compared to 36% of White children.
- Having working parents or guardians does not guarantee financial stability: 23% of Michigan children in households with two adults in the labor force were still below the ALICE Threshold in 2019.
- Children below the ALICE
   Threshold often lack access
   to resources ranging from stable
   housing and public assistance to
   education and broadband services.
   More than 550,000 children below
   the ALICE Threshold in Michigan
   did not participate in SNAP and
   nearly 300,000 had no high-speed
   internet access at home in 2019.

# WHO ARE ALICE CHILDREN?

Children below the ALICE Threshold are those under age 18 living in households with income below the basic cost of living for their communities. In 2019, 18% of children below the ALICE Threshold in Michigan were infants (0–2 years), 13% were preschool-age (3–4 years), and 69% were school-age (5–17 years). Children in Michigan's struggling households are from all demographic groups; they include children born in the U.S. and abroad, of all abilities and races/ethnicities, living with parents or guardians who are married or single, working or not working. Children in households below the Threshold live in rural, urban, and suburban areas across the state.

# Race/Ethnicity and Nativity

In 2019, the largest number of ALICE and poverty-level children in Michigan were found in the largest racial/ethnic populations: Children below the ALICE Threshold were predominantly White (512,510), Black (235,946) and Hispanic (105,798). Yet Black and Hispanic children are disproportionately represented among ALICE children - a result of persistent discrimination and systemic barriers that limit their families' access to resources and opportunities for financial stability. In 2019, 71% of Black children and 58% of Hispanic children lived in households below the ALICE Threshold, compared to 36% of White children and 30% of Asian children. Although the total population of American Indian/Alaska Native children in Michigan is smaller (9,272) than other racial/ethnic groups, these children are also disproportionately among children below the ALICE Threshold (57%).

Nativity and English-speaking ability also have an impact. Of the 46,295 children in Michigan who were born outside the country (2% of children in the state), 56% were below the ALICE Threshold in 2019, compared to 44% for those born in the U.S. Rates were even higher for Michigan children living in a family with limited English-speaking ability, with 78% below the ALICE Threshold (compared to 84% nationally).

# **Disability Status**

In 2019, there were over 96,881 children with a disability in Michigan — 5% of all children in the state. However, this is likely a significant underestimate as the number of children being served under the Individuals with Disabilities Education Act in the state is substantially higher. Children with a disability were more likely to live in households below the ALICE Threshold (62%) than those without a disability (43%).

The most common disability, impacting 75,159 children age 5 and older, was a cognitive difficulty due to a physical, mental, or emotional issue — having trouble remembering, concentrating, or making decisions.

Having a household member with a disability affects everyone in the family. In 2019 there were 457,361 children in Michigan living in a household where someone had a disability, and 61% were below the ALICE Threshold.

# **Key Terms**

- ALICE: Asset Limited, Income Constrained, Employed – households that earn above the Federal Poverty Level (FPL) but cannot afford the basic cost of living in their county. While the FPL for a family of four in 2019 was \$25,750, the average bare-minimum cost of living for a family in Michigan according to the ALICE Household Survival Budget was nearly \$64,000.
- ALICE Threshold: Derived from the Household Survival Budget, the average income that a household needs to afford housing, child care, food, transportation, health care, and a smartphone plan, plus taxes. Calculated for various household types for every U.S. state and county.
- Below ALICE Threshold: Includes children in both poverty-level and ALICE households combined.

# **Living Arrangements**

ALICE children live in all kinds of households — with married or unmarried parents, single parents, grandparents, or guardians. Children are more likely to be below the ALICE Threshold when their families have fewer adults and/or adults with lower earning potential due to systemic <u>racism</u> and <u>gender</u> and <u>age</u> discrimination.

Most children in Michigan (96%) lived with at least one of their parents (biological or adoptive) in 2019: 62% lived in a household with both parents and 34% in a household with one parent. The largest number of children below the ALICE Threshold were in married-couple households (436,639), followed by single-female-headed households (399,951). Other arrangements, representing smaller groups, were disproportionately ALICE: 53% of children in single-male-headed households were below the ALICE Threshold, as were 55% of children in unmarried-couple households. There were also differences by marital status and partnership type:

- For married-couple households, the share of children below the ALICE Threshold was higher for different-sex than same-sex married-couple households at 32% and 21%, respectively.
- For unmarried-couple households, the share
  of children below the ALICE Threshold was
  substantially higher in different-sex than
  same-sex unmarried-couple households at 56%
  and 11%, respectively.

In 2019, 11% of Michigan's children (226,806) lived in a home with a grandparent. Children living with grandparents were equally likely to be living in poverty as those living without a grandparent (at 17%), but they were more likely to be ALICE (38% vs. 26%).

In addition, there were 89,594 children in Michigan living in households without their parents in 2019. Just over 10% of these children in Michigan (9,168) were in foster care (compared to 7% nationwide). But many more children who lived without their parents were in arrangements outside of the formal system, including households headed by a grandparent or other relatives (51,320), or nonrelatives (29,106). Children living without their parents were more likely to be below the ALICE Threshold (58%), below the national rate (62%). The largest number of children below the Threshold living without their parents were White. Yet a higher percentage of Black children living without their parents were below the ALICE Threshold (73%) compared to White (52%) and Hispanic children (51%).

### **Household Work Status**

The largest driver of a child's financial stability is the employment status of household members. In 2019, most children in Michigan lived in a household with at least one worker (94%). But having working parents or quardians does not guarantee financial stability.

Children living with two adults were more likely to be financially stable than children living with a single parent or guardian. Yet even in households with two working adults, 23% of children were below the ALICE Threshold. When only one of two adults worked, the rate increased to 56%. Children living in a household with a single working parent or guardian were even more likely to be below the Threshold (72%).

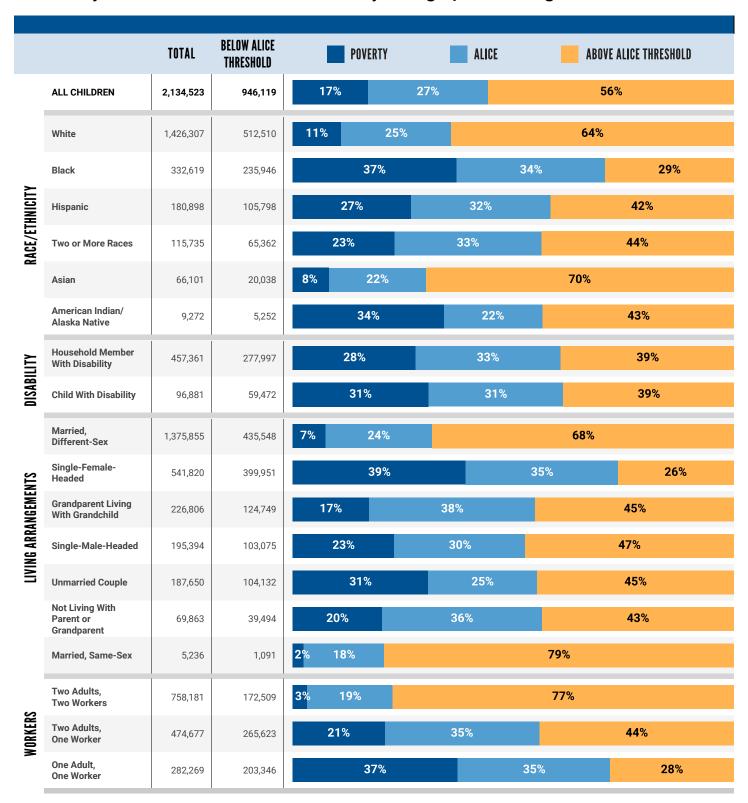

While parents and guardians work in every industry and sector in Michigan, children below the ALICE Threshold are concentrated in families where adults work in occupations with low median hourly wages. For example, in 2019, 72% of children living in a household with an adult working as a cashier, earning a median wage of \$10.97 per hour, were below the Threshold. Similarly, 75% of children with adults working as a janitor/building cleaner (median wage of \$12.30 per hour), were below the Threshold.

Even children with an adult working in a higher-wage job, such as a construction laborer (median wage of \$18.53 per hour) were below the ALICE Threshold (62%), as the income needed to afford household expenses varies by household size, composition, and location.

In addition, 25% of 16- and 17-year-olds were in the labor force in 2019 (64,231). Of teens living in households with income below the Threshold, 20% were in the labor force compared to 28% living in households above the Threshold. While at first glance these findings may seem counterintuitive, they are in line with existing research on teen employment that shows low-income youth have fewer opportunities and resources needed to work than teens from higher-income families.

## Children by Household Financial Status and Key Demographics, Michigan, 2019

Note: Percentages are rounded to whole numbers for ease of reading, which may result in percentages totaling 99% or 101%. The groups shown in this figure overlap across categories (Race/Ethnicity, Disability Status, Living Arrangements, and Workers). All racial categories except Two or More Races are for one race alone. The Hispanic group may include children of any race. "Grandparent Living With Grandchild" includes any arrangement where grandparents live with their grandchild, including where parents or other adults are present. For the Workers category, the number of workers is defined as "workers in the family over the last 12 months" from when the survey was conducted. # WHAT RESOURCES DO ALICE CHILDREN LACK?

Many ALICE families earn too much to be eligible for public assistance but still struggle to meet basic needs for their children. ALICE households are much more likely to lack stable housing, quality child care/early education, private health insurance, and home internet access, yet they still don't qualify for many public assistance programs. When these necessities are at risk, there are both <a href="mailto:short- and long-term consequences">short- and long-term consequences</a> for ALICE children.

# **Stable Housing**

Housing instability has a profound impact on a family and child's overall well-being. Children in families without stable housing face greater risks for poor physical health, increased family stress, social isolation, and lower academic performance. Children living in rented housing units and cost burdened households are more likely to go through the stress of moving — and ALICE children and children in poverty are more likely to live in both of these types of housing.

Among children below the ALICE Threshold in Michigan in 2019, 49% were in families who rented and 51% were in families who owned their home (vs. 12% and 88%, respectively, for households above the Threshold). There were also gaps by race and ethnicity both above and below the Threshold. Below the ALICE Threshold, families of Black children had the lowest homeownership rate (26%), while families of White children had the highest rate (64%). Above the ALICE Threshold, the homeownership rate for families of Black children was higher (64%), but still substantially lower than for families of White children (91%).

**52**%

of children in renter households below the ALICE Threshold in Michigan were rent burdened

Because housing is one of the most expensive items in the Household Survival Budget, it is not surprising that 52% of children in renter households below the ALICE Threshold in Michigan paid more than 35% of household income on rent (compared to 3% for children above the Threshold in renter households). The highest rates of children below the Threshold living in rent burdened households — above 90% — were in west Oakland County and north Kent County.

For all children — regardless of whether their family rented or owned — the longer they lived at their place of residence, the more likely they were to have higher income. Both above and below the ALICE Threshold, children in renter households were more likely to have moved in the past year compared to those in owner households (25% vs. 9%).

### **Education**

Quality early-childhood programs have proven to be critical to healthy child development, and to acquiring foundational skills required for a successful transition to school and future academic achievement. Of all preschool-age children in Michigan, 47% were enrolled in preschool in 2019, just below the national average (49%). In neighboring states, enrollment rates ranged from 41% in Indiana, to 45% in Wisconsin, and 47% in Ohio. Preschool enrollment rates also differed by household financial status: 37% of preschool-age children below the ALICE Threshold in Michigan were enrolled in preschool in 2019, compared to 58% of their peers above the Threshold. A smaller difference was seen in kindergarten enrollment (91% of kindergartenage children below the ALICE Threshold vs. 93% above).

Being a high school graduate prepares teens for future academic and career success. Yet in 2019, 8,063 Michigan children aged 15–17 were not in school. More than half of these teens (59%) lived in households with income below the ALICE Threshold.

### **Health Insurance**

Access to health insurance is critical to both wellness and financial stability for ALICE families and especially children. While most children in Michigan had health insurance in 2019 (97%, slightly higher than the national rate of 95%), 4% of children in families with income below the ALICE Threshold did not have coverage. Children in families with income below the ALICE Threshold were more likely to have public insurance (61%), while those above the Threshold were more likely to have private insurance (88%).

| Children:<br>Michigan | Below ALICE<br>Threshold | Above ALICE<br>Threshold |
|-----------------------|--------------------------|--------------------------|
| No Insurance          | 4%<br>(42,262)           | 2%<br>(26,432)           |
| Public Insurance      | 61%<br>(577,741)         | 10%<br>(118,958)         |
| Private Insurance     | 34%<br>(326,116)         | 88%<br>(1,043,014)       |

# **Home Internet**

The availability of internet access and devices for education has become increasingly essential for young people, yet the <u>digital divide</u> by income and race/ethnicity persists. In Michigan, 95% of children overall had home internet access in 2019, mirroring the national rate (95%). However, children below the ALICE Threshold in Michigan were less likely to have home internet access than those above the Threshold (92% vs. 98%) and were considerably less likely to have high-speed internet, which is often essential for work and online learning (68% vs. 85%).

Nearly

300,000

children below the ALICE Threshold in Michigan did not have access to high-speed internet at home There were also differences in access by race/ethnicity, especially for high-speed internet: 43% of children in Black households below the ALICE Threshold did not have high-speed internet access, compared to 29% of children in Hispanic and 28% of children in White households below the ALICE Threshold.

By location, access also varied. The percentage of children below the ALICE Threshold without high-speed internet access was highest in Newaygo, Mason, Oceana & Lake Counties (63%), and Allegan County (67%).

### **Public Assistance**

For a <u>variety of reasons</u>, public assistance does not reach all children in households that are struggling. While most children in poverty are eligible, ALICE children live in households that often earn too much to qualify for assistance. For example, the income eligibility threshold in Michigan for one of the most far-reaching public assistance programs, the <u>Supplemental Nutrition Assistance Program</u> (SNAP, formerly food stamps), is <u>200% of the FPL</u>. Even though all children in poverty should be covered by SNAP, in Michigan, the program was utilized by 64% of children in poverty (234,061) and a mere 26% of children in ALICE households (152,661) in 2019. This left a gap of 559,397 children whose families were struggling to make ends meet but not participating in SNAP.

More than

550,000

children below the ALICE Threshold in Michigan were struggling but did not participate in SNAP

SNAP coverage of children below the ALICE Threshold varied among neighboring states, from 31% in Indiana to 37% in Wisconsin, to 42% in Ohio, placing Michigan on par with Ohio with a participation rate of 41%.

Differences by race and ethnicity were also striking. In 2019, 60% of Black children below the ALICE Threshold in Michigan participated in SNAP, compared to 35% of Hispanic children and 33% of White children below the Threshold.

# HOW HAVE ALICE CHILDREN FARED DURING THE PANDEMIC?

How a child starts in life impacts their long-term health, wellness, education, and career. Family financial stability is one of the strongest <u>predictors of current and future well-being</u>. Financial instability not only contributes to current experiences of <u>stress</u>, trauma and hardship, but it impedes a child's opportunity for <u>future success</u>, including higher education, a higher income, and long-term asset building.

Even before the COVID-19 pandemic, children below the ALICE Threshold experienced the ripple effect of challenges related to their parents' work status, lack of income/savings, and family responsibilities. As shown in our recent report, *The Pandemic Divide*, households below the Threshold suffered disproportionately during the pandemic, with vulnerabilities caused by longstanding racial inequities ensuring that Black and Hispanic households experienced the greatest hardship.

Expanding on *The Pandemic Divide*, our analysis of the U.S. Census Bureau's most recent <u>Household Pulse</u> <u>Surveys</u> (July-October 2021) reveals that **children and households below the ALICE Threshold bear the brunt of the pandemic's physical and emotional toll:** 

- Financial uncertainties: Because households below the ALICE Threshold with children continue to suffer from loss of employment income and are unable to save, they remain far less confident in their ability to make their next rent or mortgage payment on time. In Michigan, more than one-third (37%) of families below the ALICE Threshold with children were slightly confident, not at all confident, or had deferred their housing payment compared to 7% of those above the ALICE Threshold.
- Food insufficiency: Throughout the pandemic, families below the ALICE Threshold with children consistently struggled to afford food. As recently as the fall of 2021, 41% of Michigan families below the ALICE Threshold with children reported that sometimes or often "children were not eating enough because we just couldn't afford enough food." While this was less common in higher-income households, 17% of respondents above the ALICE Threshold also struggled to afford food for their children. Public assistance filled in only part of the gap. In the fall of 2021, slightly more than half (55%) of students below the ALICE Threshold picked up or ate a free meal at school, received an EBT card to help buy groceries, or had free meals delivered, leaving a remaining 45% that did not.

**ALICE IN FOCUS: CHILDREN** 

- Interrupted learning: The pandemic has disrupted student learning for two years, and children in households below the ALICE Threshold have been disproportionately affected. The most immediate way to compensate for disrupted K-12 schooling is to attend summer academic programs. In the summer of 2021, Michigan children below the ALICE Threshold were more likely to have attended such programs than those above the Threshold (24% vs. 15%), reinforcing the research that shows children from low-income households are more likely to have experienced a loss of learning. Higher education was also impacted as many students changed their plans to attend college, and those below the ALICE Threshold were almost twice as likely as those above to cancel plans to take classes (20% vs. 13%).
- Delayed or missed health care: Children below the ALICE Threshold were less likely to have had preventive health care: In the fall of 2021, nearly twice as many (42%) of Michigan households below the ALICE Threshold with children had to miss, delay, or skip their child's preventive check-up in the last 12 months, compared to 22% of those above the ALICE Threshold. Forgoing or postponing care caused some children to go without routine vaccinations, screenings, and ongoing care for chronic health conditions.
- The Child Tax Credit: More than 40% of Michigan households below the ALICE Threshold with children were still not receiving the advance Child Tax Credit in the fall of 2021, for numerous reasons such as a parent not having filed a recent tax return or a child not having a Social Security number. The immediate need for the additional income is evident from the ways Michigan families who did receive the advance Child Tax Credit used it: Those below the ALICE Threshold were more likely to use it to pay off debt than those above the Threshold (52% vs. 29%) and were less likely to save it (20% vs. 41%).

**41**%

of Michigan households below the ALICE Threshold with children still had not received the advance Child Tax Credit in the fall of 2021

# ALICE IN FOCUS: CHILDREN KEY INDICATORS BY STATE, 2019

|  | Total  | Househ                  | old Incon                | ne Status                     | Rent Burden   | Preschool                                 | Internet   | SNAP   |

# **NEXT STEPS**

There's a lot more to be done to change the trajectory for ALICE children. Visit <u>UnitedForALICE.org</u> to learn more, then share this data with stakeholders in your community.

#### Learn more with:

- The <u>ALICE Children Data Dashboard</u>, to dig deeper into related topics, demographics, and sub-state geographies
- Resources related to children and financial hardship, including the references linked in this Research Brief, as well as additional resources that offer important context and even deeper analysis
- <u>The Pandemic Divide: An ALICE Analysis of National COVID Surveys</u> (2021) and other resources on the ALICE and COVID-19 webpage, to see the impacts of the pandemic on ALICE
- On Uneven Ground: ALICE and Financial Hardship in the U.S. (2020), to learn about the trends that contributed to a growing number of ALICE households even before the pandemic
- The ALICE Wage Tool, to explore wage levels by geography and occupation

#### Connect with stakeholders:

- Contact your local United Way for support and volunteer opportunities
- See members of the committees that support this work, including the ALICE in Focus National Research Advisory Committee for Children, and the ALICE in Focus National Leadership Committee for Children
- Find your state and federal representatives and see ALICE household data by legislative district with our ALICE Legislative District Tool
- Advocate for more accurate data collection by the <u>U.S. Census Bureau</u> for children who have been <u>historically undercounted</u>, including (but not limited to) young children, children of color, children with <u>disabilities</u>, and children in low-income households

**United For ALICE** is a driver of innovative research and action around financial hardship. The data and analysis are shared with United Ways, corporations, foundations, government, and nonprofits, to inform policy and promote positive change.

United For ALICE partners with the <u>Michigan Association of United Ways</u> to bring the ALICE research to Michigan, and this work is sponsored by Consumers Energy Foundation.

Michigan Association of United Ways

The **ALICE** in Focus Series utilizes ALICE measures — the Household Survival Budget and the ALICE Threshold — to analyze the U.S. Census Bureau's American Community Survey (ACS) Public Use Microdata Samples (PUMS). Each "Focus" in the series highlights a different demographic group. For more details about the methodology for the ALICE in Focus Series, go to <a href="UnitedForALICE.org/Methodology">UnitedForALICE.org/Methodology</a>.
